According to Journal Publishing Tag Library NISO JATS Version 1.1 (ANSI/NISO Z39.96-2015) by National Library of Medicine (NLM) (<http://jats.nlm.nih.gov/publishing/tag-library/1.1/attribute/article-type.html>), This type of article is an introduction to a publication, or to a series of articles within a publication, etc.

KEYWORDS: Acta Healthmedica, Open Access, Medical Research, Health Science

1. INTRODUCTION

The journal Acta Healthmedica (Website: <http://www.actahealthmedica.com> and ISSN: 2414-6528) is a new scholarly publication by Mehr Publishing established in 2016. Acta Healthmedica covers all areas of health and medical sciences, such as internal medicine, surgery, basic medical sciences (human genetics, anatomy, immunology, microbiology, pharmacology, and others), molecular medicine and biomedical sciences, health psychology and psychiatry, dentistry, community health, environmental health, occupational health, infectious diseases, medical equipment research, nursing and midwifery, and health informatics. The journal accepts all common types of articles, including original articles, systematic and traditional reviews, Meta analyses, clinical trials, case reports, opinions, letters, short reports, and critiques. We also are interested in publishing interviews and announcements of conferences and any other relevant scientific events. The journal also is interested specifically in supporting medical conferences, and it may offer them free publication of conference proceedings, books, or abstracts, as well as a selection of the conferences' best papers.

Regarding the review process, we recommend that authors carefully read the sections of our journal that provide guidelines for authors and information about our editorial work before submitting a manuscript for publication. The journal, Acta Healthmedica, will be published quarterly, and we do our best to assess all submissions for publication as expeditiously as possible.

We have good news for all of the authors who wish to publish their work in Acta Healthmedica, i.e., we will provide free English editing. All manuscripts submitted to Acta Healthmedica should be written in English. Our recommendation is that the authors use the 100% free advanced English editing that we will provide. However, authors are free to ask any other native English editor for help. When we say that advanced English editing is free, we mean that the editing itself is free, but there will be minimal tax and handling fees. The readers also can access the publication without incurring fees. This means that the publisher will publish peer-reviewed, high-quality medical research papers free of any charges to the authors or the readers. However, the publisher retains the right to change these policies at any time in the future without prior notification.

Regarding membership on the editorial board and partnership with our journal, there are various positions available for volunteers on the editorial board and in other areas, and we invite all interested medical and health research scholars to apply for those positions. We welcome any and all suggestions that authors, readers, and other scholars may wish to make to improve the quality of our new publication.

CONFLICT OF INTEREST:

There is no conflict of interest to be declared.
